Life and Hope: The Impact of Organ Transplantation on the Human Experience Mark A. Greene

At the age of eleven, Mark Greene nearly died. Neither he nor his parents knew that Mark suffered from end stage renal disease; he would need a kidney transplant to survive. Now, more than twenty-six years after his successful transplant operation, Greene tells the story of his survival following that operation.

Currently, there are approximately 170,000 organ transplant recipients in the United States, each with unique stories but sharing the commonality of improved quality of life. In *Life and Hope*, Greene discusses important principles that will not only contribute to the longevity of organ transplants, but also help recipients continue to improve their overall well-being. He blends personal experience and academic research to both teach and enlighten in a way that brings meaning to organ transplantation.

Greene shares a very personal story about his ordeal with a misdiagnosed illness that nearly took his life and nearly destroyed his family. His story is one of transformation, as he moves from the brink of death to a life full of meaning—a unique story and real-life experience that demonstrates how the organ transplant experience so eloquently contributes to the human experience.
