Social System Accounts: Linking Social and Economic Indicators through Tangible Behavior Settings (Theory and Decision Library) K. Fox

This book results from a research program on which I have spent most of my time since 1974. It addresses two of the major problems facing social system accounting: how to measure and account for nonmarket activities and how to combine social and economic indicators. The solution I propose is accounts based on behavior settings, a concept originated by Roger G. Barker more than thirty years ago. Behavior settings are the natural units of social activity into which people sort themselves to get on with the business of daily life—grocery stores, school classes, religious services, meetings, athletic events, and so on. The descriptive power of behavior settings has been established in surveys of complete communities in the United States and England, of high schools ranging in size from fewer than 100 to more than 2000 students, of rehabilitation centers in hospitals, and of several other types of organizations. Behavior settings are empirical facts of everyday life. A description of a community or an organization in terms of behavior settings corresponds to common experience. In many cases, small establishments are behavior settings; the paid roles in behavior settings are occupations; and the buildings and equipment of establishments are the buildings and equipment of behavior settings.
