Them and Us: How Neanderthal Predation Created Modern Humans Danny Vendramini

This accessible, intelligent and page turning read sheds new light on how Neanderthals evolved and the origins of human behavior, uncovering what it means to be a modern human in the 21st century. Neanderthal Predation (NP) theory begins with a radical new assessment of Neanderthal behavioral ecology by pulling together new archaeological and genetic evidence, showing they weren't docile omnivores, but savage, cannibalistic carnivores - top flight predators of the stone age; Apex predators at the top of the food chain, and what happened next - when humans became prey. "Danny Vendramini presents a truly unique and innovative picture of the role of Neanderthal predation in human evolution... Vendramini pulls together countless different threads of scientific evidence to re-cast Neanderthals as "apex predators", proverbial "wolves with knives" who were effective rivals with our ancestors.... It has been a long time since I read a book about human evolution that I enjoyed so much." Associate Professor John J. Shea. Stony Brook University, New York.
