Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals

Igor L. Shabalin

Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals Igor L. Shabalin

This exhaustive work in three volumes with featuring cross-reference system provides a thorough overview of ultra-high temperature materials – from elements and chemical compounds to alloys and composites. Topics included are physical (crystallographic, thermodynamic, thermo-physical, electrical, optical, physico-mechanical, nuclear) and chemical (solid-state diffusion, interaction with chemical elements and compounds, interaction with gases, vapours and aqueous solutions) properties of the individual physico-chemical phases and multi-phase materials with melting (or sublimation) points over or about 2500 °C. The first volume focuses on carbon (graphite/graphene) and refractory metals (W, Re, Os, Ta, Mo, Nb, Ir). The second and third volumes are dedicated solely to refractory (ceramic) compounds (oxides, nitrides, carbides, borides, silicides) and to the complex materials – refractory alloys, carbon and ceramic composites, respectively. It will be of interest to researchers, engineers, postgraduate, graduate and undergraduate students in various disciplines alike. The reader is provided with the full qualitative and quantitative assessment for the materials, which could be applied in various engineering devices and environmental conditions at ultra-high temperatures, on the basis of the latest updates in the field of physics, chemistry, materials science, nanotechnology and engineering.

From reader reviews:

Melissa Sanders:

What do you ponder on book? It is just for students because they are still students or this for all people in the world, exactly what the best subject for that? Just you can be answered for that issue above. Every person has various personality and hobby per other. Don't to be pushed someone or something that they don't would like do that. You must know how great along with important the book Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals. All type of book are you able to see on many sources. You can look for the internet methods or other social media.

Paul Cockrell:

This Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals are usually reliable for you who want to be a successful person, why. The explanation of this Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals can be one of many great books you must have is definitely giving you more than just simple reading through food but feed you actually with information that perhaps will shock your before knowledge. This book is handy, you can bring it everywhere and whenever your conditions throughout the e-book and printed types. Beside that this Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals forcing you to have an enormous of experience including rich vocabulary, giving you demo of critical thinking that could it useful in your day pastime. So , let's have it appreciate reading.

Diane Russel:

The book untitled Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals contain a lot of information on the idea. The writer explains your ex idea with easy means. The language is very clear and understandable all the people, so do not worry, you can easy to read this. The book was written by famous author. The author gives you in the new period of time of literary works. It is easy to read this book because you can continue reading your smart phone, or model, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can available their official web-site in addition to order it. Have a nice study.

Michael Sheridan:

Beside this specific Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals in your phone, it can give you a way to get nearer to the new knowledge or facts. The information and the knowledge you might got here is fresh through the oven so don't become worry if you feel like an older people live in narrow town. It is good thing to have Ultra-High Temperature Materials I: Carbon (Graphene/Graphite) and Refractory Metals because this book offers for your requirements readable information. Do you sometimes have book but you don't get what it's exactly about. Oh come on, that would not happen if you have this with your hand. The Enjoyable blend here cannot be questionable, like treasuring

beautiful island. So do you still want to miss this? Find this book in addition to read it from now!
