Searching Multimedia Databases by Content (Advances in Database Systems) Christos Faloutsos
Searching Multimedia Databases by Content bridges the gap between the database and signal processing communities by providing the necessary background information for the reader and presenting it along with the intuition and mechanics of the best existing tools in each area.

The first half of *Searching Multimedia Databases by Content* reviews the most successful database access methods, in increasing complexity, reaching up to spatial access methods and text retrieval. In all cases, the emphasis is on practical approaches that have been incorporated in commercial systems, or that seem very promising.

The second half of the book uses the above access methods to achieve fast searching in a database of signals. A general methodology is presented, which suggests extracting a few good features from each multimedia object, thus mapping objects into points in a metric space. Finally, the book concludes by presenting some recent successful applications of the methodology on time series and color images.

Searching Multimedia Databases by Content is targeted towards researchers and developers of multimedia systems. The book can also serve as a textbook for a graduate course on multimedia searching, covering both access methods as well as the basics of signal processing.

From reader reviews:

Ethan Scott:

Book is to be different for each and every grade. Book for children until finally adult are different content. As it is known to us that book is very important usually. The book Searching Multimedia Databases by Content (Advances in Database Systems) has been making you to know about other information and of course you can take more information. It is quite advantages for you. The e-book Searching Multimedia Databases by Content (Advances in Database Systems) is not only giving you far more new information but also to become your friend when you experience bored. You can spend your spend time to read your publication. Try to make relationship with the book Searching Multimedia Databases by Content (Advances in Database Systems). You never sense lose out for everything when you read some books.

Shawn Farr:

The particular book Searching Multimedia Databases by Content (Advances in Database Systems) has a lot of information on it. So when you read this book you can get a lot of profit. The book was published by the very famous author. Tom makes some research ahead of write this book. That book very easy to read you may get the point easily after reading this article book.

Nikki Jones:

The book untitled Searching Multimedia Databases by Content (Advances in Database Systems) contain a lot of information on the item. The writer explains your ex idea with easy means. The language is very clear to see all the people, so do not necessarily worry, you can easy to read the item. The book was written by famous author. The author will bring you in the new age of literary works. You can read this book because you can read on your smart phone, or model, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can start their official web-site in addition to order it. Have a nice study.

Georgia Yorke:

As a student exactly feel bored to help reading. If their teacher questioned them to go to the library in order to make summary for some publication, they are complained. Just small students that has reading's heart and soul or real their interest. They just do what the instructor want, like asked to go to the library. They go to generally there but nothing reading significantly. Any students feel that reading is not important, boring along with can't see colorful photos on there. Yeah, it is to get complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. Therefore this Searching Multimedia Databases by Content (Advances in Database Systems) can make you really feel more interested to read.
