## **Behavioural Models in Psychopharmacology: Theoretical, Industrial and Clinical Perspectives**

Much of psychopharmacology is concerned with the use of animal behavior to model aspects of human psychiatric disorders. Even so, behavioral models in psychopharmacology are used for different purposes; the main concern of industrial psychopharmacologists is specifically to develop new and improved drugs for the treatment of mental disorders, while research scientists use animal models to investigate the underlying nature of such conditions. The important distinction between these different perspectives is made explicit for the first time in this book. By considering such conditions as anxiety, depression, mania and schizophrenia, feeding disorders, dementia, and drug dependence, this book provides a comprehensive and critical review of the adequacy of the behavioral procedures used by psychopharmacologists to model psychiatric disorders.
