Digital Photogrammetry: A Practical Course Wilfried Linder

1.1 Basic idea and main task of photogrammetry If you want to measure the size of an object, let's say the length, width and height of a house, then normally you will carry this out directly at the object. Now imagine that the house didn't exist anymore – it was destroyed, but some historic photos exist. Then, if you can determine the scale of the photos, it must be possible to get the desired data. Of course you can use photos to get information about objects. This kind of information is different: So, for example, you may receive qualitative data (the house seems to be old, the walls are coloured light yellow) from photo interpretation, or quantitative data like mentioned before (the house has a base size of 8 by 6 meters) from photo measurement, or information in addition to your background knowledge (the house has elements of the “art nouveau” style, so may be constructed at the beginning of the 20 century), and so on.
